

Vegetation

The Humid Subtropical is made up of mostly evergreen trees, bushes and shrubs. The trees here are mostly very delicate unlike pines and spruce. The reason most trees here are evergreens is so they can endure the long months of warmth and regular rain. These plants have adapted to the regular climate conditions. A few type of broad leave evergreens found here are palm trees and ferns. This climate is usually easy to farm in because the growing season is usually 8 months long!

Tourist Information

May, June, and July are usually the most uncomfortablely hot and humid months in this climate. The best time to go is in the Fall because rainfall is lighter and it is not as hot. You wouldn't want to go when it is winter because that is when most of the rainfall occurs and it can get a little cold.

What to Bring

When you go to the Humid Subtropical climate make sure you bring a lot of clothes that can keep you cool. The climate can get very hot and humid but it can also get a little chilly. Make sure you know what the weather is going to be when you get there and what it is usually like in that time of year.

Georgia is in this climate and is a place where tourist go.

Outdoor Activities

There are a lot of things to do outside in this climate because it is hot out a lot. You could go play a lot of sports, go on a walk or run, play with your pets, or play with your friends. If you do play outside all day make sure you drink plenty of water so you don't get dehydrated.
